Quick Integration with with Signage, PC and Web.

Streme Encoder and Media Server fulfill the long standing need for an easy, cost effective product for quick encoding and streaming of media on corporate IP networks and web sites.

### Live broadcast of CEOs address

Ever wished that the all important CEO address be broadcast live over the entire corporate network? The media being available for groups of users, for senior management, for remote users and for mobile users? The two components from Streme Encoder and Streme Media Server are positioned to do just that and more

Not only can you broadcast CEOs address, you can also broadcast live corporate events, record media and play pre-recorded media files and more.

### Scalable and Reliable

The platform is completely scalable and reliable, based on industry standard work station class hardware and add on cards, supporting a wide range of graphics standards like HDMI, Component, DVI and VGA. With the media server based on Server class hardware and architecture, your reliability is guaranteed. With fail safe options provided, peace of mind is guaranteed as you scale up. Built on the robust streme framework with over 100 components in place, you are sure of performance and flexibility in a single package.

### Instant Record and Playback

A powerful facility to record streams of AV as you broadcast them over the IP network is available. Ideal of recording live events, training sessions and address by senior management, this facility is used to create a repository of media assets in the corporate library.

### Now view the content anywhere anytime

With compatibility options provided for mobile users, desktop/laptop users, signage users (for larger groups with larger displays), you are guaranteed that your message will reach wherever there is a network. Effective communication couldn't be better.

### Wide Applications, one Solution

Industries may vary and applications diverse, but when there is a choice for media streaming, Streme Encoder and Media Server offers an unparalleled price to performance ratio.

# Streme Encoder and Media Streamer

Stream Audio Visual Media over networks – Seamlessly.

## Streme Encoder

A powerful encoder based on industry standard video input cards for all types of connectors, provides a perfect scalable option for adding more channels in future. Wide range of options of cards and encoders to stream from cameras, media, computers etc. is provided.

## Streme Encoder Manager

A powerful, feature rich manager to control the settings of the media encoder. The features provide a one stop console for system management.

## Streme Recorder

Just select the stream you wish to record and the media starts getting saved to the disk instantly. Recording was never so easy and convenient

## Streme Media Server

A powerful media server, capable of transmitting multiple channels of media simultaneously over the network in multicast or unicast mode. Optimized for bandwidth, this server is built in industry standard hardware and operating systems for maximum reliability and scalability.

## View on Digital Signages

Tightly integrated with Streme Digital Signage, you can specify the IP stream to be captured in the media window using the central manager, and you are done. Digital signage on large screens is ideal for a larger group of people to watch the media. Typically implemented in staff areas, this is an ideal corporate communication method.

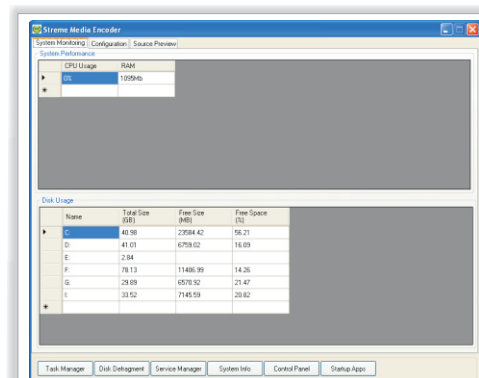

## View on Web Browser on Desktop/Laptop/Tablet

Just by clicking on the email link, you can open the media being streamed on your favorite device like a desktop, laptop or a tablet.

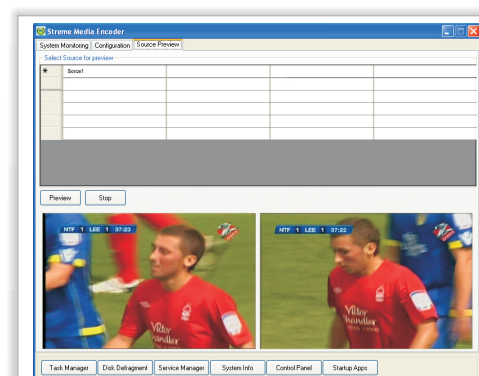

## View on Mobile Devices

On the move? Relax. You can now catch the latest corporate broadcast on your device, data plans permitting. This option provides your remote workers to be on line from any time anywhere. Just imagine catching with an important corporate communication video on the move.
